Wi-Fi 7 FEM 62371

High Power Linear 2.4 GHz Front-End Module

Product Overview

The DC-RF Wi-Fi 7 FEM 62371 is a high-power, linear Front-End Module designed for IEEE 802.11be (Wi-Fi 7) communication architectures. Operating in the 2.4–2.5 GHz band, this module integrates RF front-end functionality for compact wireless system designs and is optimized for high linearity performance in EHT40 applications.

Key Features

Feature	Description
Frequency Range	2.4–2.5 GHz
Wireless Standard	Optimized for Wi-Fi 7 / IEEE 802.11be
Output Performance	17.0 dBm MCS13 EHT40 @ -45 dB DEVM
Performance Category	High Power, Linear
Architecture	Integrated RF Front-End Module for compact WLAN system integration

Key RF Specifications

Typical performance at room temperature (25°C).

Electrical Specifications

Note: Specifications are preliminary and subject to change without notice.

Parameter	Specification / Condition
Operating Frequency	2.4–2.5 GHz
Performance Category	High Power, Linear
MCS13 / EHT40 / DEVM	17.0 dBm @ -45 dB DEVM
Wireless Standard	Wi-Fi 7 / IEEE 802.11be
Application Band	2.4 GHz WLAN front-end applications
